Why?
For children with severely impaired movement or other disabilities, the simple act of playing with a toy can be a huge motivation. Adapted toys can be prohibitively expensive, and are rarely available in common toy outlets. The adaptation process can be a fun ‘problem-solving’ activity to learn!

What?
Toys for All Tots, a student organization at the University of Rochester, adapts battery-operated toys by rewiring circuits with a universal jack so special needs children can play with them using enabling switches.

How?
Our group has adapted dozens of toys! We are hosting this event to help families learn to adapt their own! We will have the tools, wires, equipment and student volunteers to help you adapt a toy! Simple activation switches will be on hand, for testing, but we recommend you bring your own.

Best Toys to Bring:
Toys with simple on/off activation: toys with lights, sounds, and movement such as Tickle-Me Elmo, bubble machines, dancing plush animals, plastic bug/animal music players. Your child’s favorite! We will also have some toys available for adaptation and adoption! Remember to bring a switch if you have one!

Family Adaptation Event!
