

Fellow of the Optical Society of America

For important contributions in diffraction theory, for seminal contributions in the optical design of high-energy laser systems, and for dedicated management/leadership at the National Ignition Facility Project of LLNL

Professor George,

Thank you.

For asking questions ...
they helped me discover new things.

For introducing me to seminal papers ...
they built a solid foundation.

For challenging me to answer fundamental questions ...
these kept me focused and disciplined.

For expressing joy in finding complete answers ...
this encouraged me to find more answers.

For sharing your incredible insights that
connect disparate topics ...
I learned to think about problems and
situations from multiple perspectives.

For sometimes being abstract ...
it spurred me to re-organize and re-think.

For treating me like a colleague ...
that made me feel important.

For caring about my well being ...
that made me feel loved.

For seeking recognition for me ...
that makes me feel grateful.

Ed English
