

1. Optical Design

Location: Yuyao, Zhejiang, China

Job Description:

1. Be responsible for optical scheme design of new products and formulate corresponding assessment standards to ensure the products can be introduced into mass production;
2. Design evaluation of optical system, tolerance analysis and cause analysis of bad problems;
3. Be responsible for the optical design of new products in TS phase, including ghost analysis, improvement, parameter analysis, to determine whether the final product meets the design objectives;
4. Assist the engineering department in ES stage work, provide technical support, so that products can be quickly introduced into mass production or problems can be solved in time;
5. Provide corresponding technical support and service for customers;
6. Study the development trend of product market, learn relevant frontier technology, and apply it to specific product design;
7. Complete the work assigned by the superior.

Key Qualifications:

1. Master's degree or above;
2. Major in optics;
3. English as working language;
4. Be proficient in using ZEMAX / code V and other optical design and analysis software, and have basic mechanical and CAD knowledge;
5. Have strong ability of creation, special research and execution; have calm and meticulous personality.

2. Micro/Nano Optical Engineer

Location: Yuyao, Zhejiang, China

Job Description:

Responsible for the process development of lithography / etching / nano imprinting / deposition / packaging / lamination / inking / cleaning based on wafer level micro optical components, including research on process flow and related glue materials:

1. Development, introduction and trial work of new products, and introduction of feasible mass production scheme;
2. Responsible for the confirmation, design and distribution of relevant process flow, technical standards and documents;
3. Organize process optimization, routine and mass production difference analysis of new product trial, and formulate and promote stable production plan.

Key Qualifications:

1. Bachelor degree or above, science and engineering background;
2. Have mechanical / physical / optical / chemical basis;

3. Experience in lithography, dry wet etching, nano imprinting, deposition, packaging, lamination, inking, cleaning and other semiconductor processes is preferred;
4. Serious attitude and steady work;
5. Students with strong learning and practical skills are preferred.
